

Castglo API Integration Status Report

1. Introduction

This report provides a comprehensive overview of the current status of API integration across the Castglo platform. All major modules have been audited and updated to move from static mock data to real-time interactions with the backend services at <https://castglo.onrender.com/api/v1>.

2. Completed Integrations (Fully Functional)

The following modules and pages are now fully functional and connected to live backend endpoints.

2.1 Authentication & User Management

- **User Authentication:** Register, Sign-In, and Sign-Out flows for all roles (Talent, Casting Director, Industry Professional, Admin).
- **Password Security:** "Forgot Password" and "Reset Password" workflows are active.
- **Session Handling:** JWT-based authentication ensures persistent user sessions.

2.2 Public Discovery Experience

- **Landing Page** ([Index.tsx](file:///D:/Real-Project/NextJS/TechThoth_PR/castglo/src/pages/Index.tsx)): Live fetching of Featured Castings and Discoverable Talent.
- **Talent Search** ([Browse.tsx](file:///D:/Real-Project/NextJS/TechThoth_PR/castglo/src/pages/Browse.tsx)): Real-time searching and filtering for talent profiles.
- **Public Profiles** ([TalentProfile.tsx](file:///D:/Real-Project/NextJS/TechThoth_PR/castglo/src/pages/TalentProfile.tsx)): Detailed public view of talent credentials, portfolio, and skills.
- **Lead Capture** ([Contact.tsx](file:///D:/Real-Project/NextJS/TechThoth_PR/castglo/src/pages/Contact.tsx)): Direct contact form integration for business inquiries.

2.3 Dashboard Systems

- **Admin Dashboard:** Real-time platform analytics, user verification controls, and action logs.
- **Talent Dashboard:** Complete profile editing, headshot/showreel uploads, job browsing, and audition submission tracking.
- **Director Dashboard:** Project creation, submission review, and applicant communication.
- **Professional Dashboard:** Service management and industry-specific discovery tools.

3. Pending Integrations & Roadblocks

The following items are currently using static data or placeholders and require additional backend infrastructure.

3.1 Specialized Features

- **Virtual Auditions:** The "Instant Audition" feature requires a dedicated video-conferencing API integration (e.g., Twilio Video, Daily.co).
- **Payments & Escrow:** Booking transactions are currently static, pending the live integration of a payment gateway (e.g., Stripe) and escrow logic.

3.2 Global Moderation

- **Global Submissions View:** The administrative overview of all auditions across the platform is awaiting a centralized moderation API endpoint.

4. Technical Notes & Recommendations

- **Domain Stability:** All API endpoints have been synchronized to the production domain `castglo.onrender.com`.
- **Media Management:** We recommend implementing chunked uploads for larger video files (>50MB) to ensure system reliability during audition submissions.
- **Email Verification:** A dedicated landing page for email token verification is recommended to complete the full security lifecycle.
